

ERA Haor Website Expansion and Donor-Growth Strategy

Executive summary

This review is based on the public website as accessible on **August 8, 2026**. I did not have access to ERA's Google Analytics, Google Search Console, hosting control panel, CMS administration, payment-merchant account, or donor database. Accordingly, the findings below combine a **public-site audit** with an implementation specification; traffic, conversion, indexing, hosting security, and real-user performance findings must be validated once those systems are accessible.

ERA already has important ingredients for a credible nonprofit website: a long operating history dating to 1997, formal registration information, seven program areas, a large archive of projects, named institutional partners, leadership information, case stories, audit reports, and annual reports. ¹ The problem is primarily **packaging, consistency, conversion design, freshness, and evidence presentation**, rather than a total lack of content.

The single largest fundraising weakness is the current donation experience. ERA's public donation page presently functions essentially as a bank-transfer instruction page, giving the Pubali Bank account, SWIFT code and routing information but not offering an integrated online donation checkout, selectable donation amount, recurring-giving option, program designation, automated receipt, donor FAQ, or post-donation stewardship journey. ² That creates unnecessary friction precisely where donor intent is highest.

There are also several credibility leaks that should be corrected before paid donor acquisition begins. The homepage alternates among "**Sponsor a Child**," "**Sponsor a Girl**," and "**Sponsor a Woman**" terminology, while its volunteer section references both more than **55,000 young changemakers** and a metric of **1,900 nationwide volunteers** without explaining the difference. ³ The contact page has displayed an incomplete email address in one location; project records use inconsistent date wording such as "to till"; the blog is visibly stale, with its visible posts dated June 15, 2025; and some content makes statistical assertions without properly linked sources. ⁴ These are individually small problems, but collectively they affect donor confidence. Candid's current fundraising guidance emphasizes that donor trust ultimately rests on measurable results, plain financial communication, leadership credibility and governance—not fundraising copy alone. ⁵

Recommended strategic direction: transform erahaor.com from an organization brochure into a **bilingual evidence-and-fundraising platform** built around five user questions:

**Who is ERA? → What problem does it solve? → What measurable difference has it made?
→ Can I trust it? → How can I help now?**

The first six months should add approximately **30–50 substantial, indexable pages**, primarily program hubs, impact/results pages, location pages, donor pages, governance/transparency resources and upgraded project/story pages. Page count should never be an objective by itself: Google's own guidance emphasizes useful, user-focused content rather than producing pages merely to attract search traffic. ⁶

The recommended technology direction is to **retain WordPress if backend inspection confirms that it is the current CMS and it is reasonably maintainable**. The site's author/comment behavior strongly suggests a WordPress installation, although that cannot be confirmed conclusively from the public crawl alone. WordPress is highly extensible and designed for publishing pages, posts and custom functionality; for ERA, a rebuild on another CMS would probably add migration cost without creating equivalent donor value unless the existing implementation is seriously compromised. ⁷

For local online donations, begin formal merchant evaluation with **SSLCOMMERZ, aamarPay and shurjoPay**, all of which publicly offer Bangladesh payment-gateway capabilities; the latter two explicitly advertise both local and international acceptance, while SSLCOMMERZ supports APIs/plugins and broad local payment-channel aggregation. ⁸ Do not assume Stripe can be opened directly by a Bangladesh-registered ERA entity: Bangladesh is not on Stripe's supported merchant-country list as of August 8, 2026. ⁹ Whichever gateway is selected, ERA's finance/legal team should confirm how online foreign donations fit its NGO Affairs Bureau approvals. NGOAB's current instructions state that foreign donations and expenditure are subject to its applicable registration, project-approval and banking requirements. ¹⁰

A **medium-scope implementation** is the strongest fit: approximately **450–800 specialist hours over four to six months**, followed by an ongoing content/fundraising program. As a planning model rather than a vendor quotation, allow approximately **US\$10,000–25,000** for a professionally executed medium implementation; a lean reuse of the existing site might be **US\$3,000–7,000**, while a full bilingual redesign with advanced CRM, dashboards, extensive content production and custom integrations could exceed **US\$30,000–70,000**.

The sequence matters more than cosmetic redesign:

Month one: fix accuracy/trust issues, gain analytics/hosting access, define architecture, configure measurement, decide gateway and CRM.

Months two and three: launch online giving, core donor/transparency pages, seven program hubs and priority Bangla pages.

Months three through six: migrate/enrich the project archive, publish impact/location content, execute SEO/backlink outreach and automate stewardship.

After launch: optimize donation conversion, recurring giving, donor retention and organic search from measured data.

M+R's 2026 nonprofit benchmark provides useful directional context—not a forecast for a Bangladesh NGO: monthly gifts represented 27% of participating nonprofits' online revenue in 2025, while new online donor retention was only 24%, illustrating why ERA should design **retention and recurring giving at the same time as acquisition**. ¹¹

Evidence-based site audit

The site's existing architecture is shallow at the top level—Home, About, Projects, Case Story, Blog and Contact—despite ERA presenting seven distinct program areas and a substantial multi-page project portfolio. ¹² The redesign should expose that depth rather than hide it behind one "Projects" archive.

Priority legend: **Critical** = address before donor campaigns; **High** = first launch cycle; **Medium** = subsequent optimization.

Audit area	Current observation / question to verify	Required action or test	Priority
Content	Sponsorship terminology varies among child/girl/woman. ³	Decide the actual product/program name, eligibility, safeguarding rules, monthly amount and scope; use one name everywhere. Redirect superseded URLs.	Critical
Content	Homepage refers to 55,000+ young changemakers while displaying 1,900 nationwide volunteers. ³	Define what each figure represents, reporting period and source—or remove one. Every headline impact statistic should have a definition and date.	Critical
Content	Blog's visible articles are dated June 15, 2025; at least one is "Uncategorized." ¹³	Establish an editorial calendar; assign named authors, proper categories, review dates and evidence citations.	High
Content	Project archive is substantial, but project periods and text formatting are inconsistent. ¹⁴	Normalize dates to "October 2024–present" or actual end date; standardize partner names, status, locations and project taxonomy.	High
Content	Project pages often explain context and objectives more clearly than measured results. ¹⁴	Add baseline, target, people reached, outputs, outcomes, reporting period, evidence source and last-updated date.	High
Content	Public-facing statistical claims are not always visibly sourced. ¹³	Introduce editorial fact-checking: every non-ERA statistic gets a primary/authoritative source and date.	Critical
Content	Annual-report index currently exposes reports through 2023–24, with apparent gaps in the archive. ¹⁵	Publish all available years, explain genuine gaps, and create an HTML summary for the latest annual report.	High

Audit area	Current observation / question to verify	Required action or test	Priority
Content	Financial overview exposes several audit reports but little web-readable financial interpretation. ¹⁶	Add annual income/expenditure summaries, funding mix, program/administration categories and audit status in HTML, with downloadable reports.	High
Content	About page already gives NGO Affairs Bureau and Social Services registration information. ¹⁷	Elevate these into a dedicated "Registration & Governance" trust page with scanned certificates where publication is appropriate.	High
UX	Seven program themes are presented, but top navigation does not expose seven substantive program hubs. ³	Create "Our Work" mega-menu or landing page linking each program hub, projects, locations and impact stories.	High
UX	Donate is primarily bank-transfer instructions. ²	Create a one-page/low-step online checkout plus bank-transfer fallback.	Critical
UX	Different audiences—individual donor, institutional funder, corporate partner, volunteer, media—lack distinct journeys.	Add audience-specific landing pages and forms instead of one generic contact form.	High
UX	Important transparency links sit primarily in the footer. ¹⁸	Add "Impact & Transparency" to primary navigation and trust panels on donation/project pages.	High
UX	Current contact experience is essentially name/email/message.	Add subject routing: Donation, Partnership/Funding, Media, Volunteer, Safeguarding/Complaint, General Inquiry.	Medium
UX	Careers and volunteering pathways should be checked for link/path consistency.	Crawl all menus/buttons and verify each CTA destination, status code and user intent.	High
SEO	Exact indexed-page count is unknown without Search Console/crawl data.	Verify domain property in Search Console; export indexed/not-indexed URLs and crawl entire site.	Critical
SEO	Program architecture is too weak for the breadth of ERA's work.	Build one authoritative hub per program with internal links to every corresponding project, story and publication.	High

Audit area	Current observation / question to verify	Required action or test	Priority
SEO	Metadata quality has not been validated at scale.	Crawl title tags, meta descriptions, H1s, canonicals, robots directives, duplicate pages and status codes. Google's guidance recommends descriptive pages, links, image text alternatives and crawlable organization. ⁶	High
SEO	Sitemap state not validated.	Generate clean XML sitemaps by content type and submit them through Search Console; Google explicitly supports sitemap submission and error monitoring there. ¹⁹	High
SEO	Multilingual implementation is absent/incomplete.	Create explicit English/Bangla URLs and reciprocal hreflang; Google recommends identifying localized alternatives rather than relying on locale-adaptive delivery. ²⁰	High
SEO	Structured data not validated.	Add/validate Organization/NGO-appropriate organization markup, BreadcrumbList and Article markup where applicable; never add unsupported review/rating claims. Google notes valid structured data can make content eligible for enhanced result features. ⁶	Medium
Analytics	GA4/GTM/Search Console access unknown.	Inventory all properties, ownership, tags and account administrators before redesign. Preserve historical data.	Critical
Analytics	Donation funnel cannot currently be meaningfully measured end-to-end.	Instrument donation-page view → amount selection → checkout start → payment result → receipt confirmation. Mark successful donation as a GA4 key event. ²¹	Critical
Analytics	Payment reconciliation and attribution likely disconnected.	Store campaign/source IDs in CRM/payment record; send server-verified success—not merely button clicks—as final conversion. Measurement Protocol can supplement client-side collection for server-side/offline interactions. ²²	High
Technical	Current CMS/host/plugin inventory unavailable.	Obtain hosting/CMS access; document WordPress/core version if applicable, theme, plugins, PHP/runtime, DNS, CDN, SMTP, backups, licenses and owners.	Critical

Audit area	Current observation / question to verify	Required action or test	Priority
Technical	Real-user speed unknown.	Baseline PageSpeed/Lighthouse and Search Console field data. Target Core Web Vitals at the "good" thresholds: LCP $\leq 2.5s$, INP $\leq 200ms$, CLS ≤ 0.1 at the 75th percentile. ²³	High
Technical	Image-heavy program/partner content can add unnecessary weight.	Convert large photography to AVIF/WebP where supported, responsive <code>srcset</code> , correct dimensions, lazy-load below-fold images, preserve high-quality originals offline.	High
Technical	Forms require reliable delivery.	Use authenticated transactional email/SMTP; log form submissions server-side; monitor failures; prohibit sensitive beneficiary information in generic web forms.	High
Security	Backend security cannot be assessed publicly.	Patch CMS/plugins/themes; eliminate abandoned plugins; enforce least privilege, unique admin accounts, MFA/2FA and staging before production changes. WordPress specifically recommends staying updated, controlling permissions, backups and logging. ²⁴	Critical
Security	Donation will increase attack value.	Use gateway-hosted/tokenized card handling where possible so ERA does not store raw card details; add WAF/rate limiting, malware monitoring and incident procedures.	Critical
Security	Backup/recovery unknown.	Daily database backup plus scheduled full backups to an independent location; document and test restoration rather than merely checking that backup jobs run.	Critical
Security	Privacy/donor-data handling not prominent.	Publish privacy policy, donor privacy statement, retention schedule, cookie/analytics notice as applicable, and internal access rules. Donor privacy is explicitly one of the trust items Charity Navigator advises donors to check. ²⁵	High

Audit area	Current observation / question to verify	Required action or test	Priority
Mobile	Actual funnel cannot be tested until an online checkout exists.	Design mobile-first: prominent thumb-reachable Donate CTA, minimal fields, native keyboard types, fast payment hand-off and readable receipt/confirmation.	Critical
Mobile	Search/mobile experience must contain equivalent substantive content.	Do not hide essential content or links only on desktop; Google's indexing guidance is mobile-focused. ²⁶	High
Accessibility	Formal accessibility audit unavailable.	Adopt WCAG 2.2 AA as acceptance target; W3C's current quick reference covers text alternatives, captions, keyboard operation and other success criteria. ²⁷	High
Accessibility	Partner logos, photographs and visual impact elements require meaningful alternatives.	Add contextual alt text for informative images; use empty alt for purely decorative images. Google also recommends descriptive image alternatives for understanding images. ⁶	High
Accessibility	Forms/payment errors can exclude keyboard/screen-reader users.	Explicit labels, programmatically associated errors, accessible focus, status announcements, no color-only error states, keyboard test every field.	Critical
Accessibility	Bilingual pages require correct language handling.	Set document/element language attributes, correct Bangla typography, accessible language switcher and translated form/error/receipt content.	High
Accessibility	Reports are PDF-heavy. ²⁸	Make key report content available in accessible HTML; remediate newly produced PDFs with headings, reading order, tags and text alternatives.	Medium

A critical governance principle is to avoid treating the redesign as a graphic-design exercise. The website will expose weaknesses in **impact data definitions, donor processes, editorial approval, document management and finance/reporting**. Those operating processes need owners.

Content architecture and multilingual strategy

ERA has enough underlying subject matter to create a much stronger information architecture. Its seven program areas include disaster/emergency response, climate/disaster resilience, WASH, livelihoods, education/rights/governance, health/nutrition/family welfare, and youth/advocacy. ²⁹ The recommended expansion should therefore turn those program labels into permanent search and donor destinations.

Recommended top-level architecture

This does not mean every menu item needs to appear simultaneously in a desktop navigation bar. "Impact & Transparency" and "Get Involved" can act as grouped destinations while preserving a clean navigation experience.

Recommended new/expanded page inventory

Page family / suggested title	Recommended URL concept	Initial word range	Metadata direction	Main conversion
Our Impact in the Haor Region	<code>/impact/</code>	1,200–1,800	Title: "ERA Impact in Sunamganj & Bangladesh"; description summarizing verified reach, outcomes and reporting period	Explore results / Donate
Emergency Response & Recovery	<code>/programs/emergency-response/</code>	900–1,400	Program + geography + ERA	Emergency donation
Disaster Risk Reduction & Climate Resilience	<code>/programs/climate-resilience/</code>	1,000–1,500	"Climate Resilience in Bangladesh's Haor Region"	Fund/partner
Water, Sanitation & Hygiene	<code>/programs/wash/</code>	900–1,400	"WASH in Flood-Prone Sunamganj"	Support WASH
Livelihood & Market Development	<code>/programs/livelihoods/</code>	900–1,400	Livelihoods + haor communities	Give / Partner
Education, Child Rights, Governance & Justice	<code>/programs/education-rights/</code>	1,000–1,500	Education/rights + Sunamganj/Bangladesh	Sponsor/support
Health, Nutrition & Family Welfare	<code>/programs/health-nutrition/</code>	900–1,400	Rural health/nutrition + location	Support health
Youth Engagement & Advocacy	<code>/programs/youth/</code>	900–1,300	Youth engagement + Bangladesh	Volunteer/partner

Page family / suggested title	Recommended URL concept	Initial word range	Metadata direction	Main conversion
Where We Work: Sunamganj and the Haor Region	/where-we-work/sunamganj/	1,200–1,600	"Development Work in Sunamganj's Haor Communities"	Explore projects
Selected upazila/ location profiles	/where-we-work/[upazila]/	600–900 each	Place + ERA programs	Local project
Donate to ERA	/donate/	700–1,100 + form	Mission-oriented donation title; emphasize secure online giving	Donate now
Give Monthly	/monthly-giving/	700–1,000	"Monthly Giving for Haor Communities"	Start monthly gift
Support Girls' / Children's Education	/education-sponsorship/	900–1,300	Use the final internally approved program name consistently	Sponsor
Emergency Appeals	/emergencies/	600–900 hub	Bangladesh/Sunamganj emergency relief	Donate
Individual appeal pages	/emergencies/[campaign]/	700–1,100	Specific emergency + location/date	Campaign gift
Partner With ERA	/partners/funding-partnerships/	1,000–1,500	"Partner with a Local NGO in Sunamganj"	Partnership inquiry
Corporate Partnerships	/corporate-partnerships/	800–1,200	CSR/ESG partnership + Bangladesh	Contact partnerships
Leadership & Governance	/governance/	800–1,200	Board, leadership, accountability	Trust / contact
Registration & Legal Information	/registration/	500–900	NGO registrations + ERA	Verify ERA
Financial Transparency	/financials/	800–1,200	Audits/financial reporting	Read reports
Annual Reports	/reports/annual-reports/	500–800 hub	Annual reports + ERA	Download/ read

Page family / suggested title	Recommended URL concept	Initial word range	Metadata direction	Main conversion
Policies & Accountability	/policies/	500–900 hub	Safeguarding, privacy, complaints, donor privacy	Read policy
Safeguarding	/safeguarding/	700–1,000	Safeguarding commitments/reporting	Report concern
Feedback & Complaints	/complaints-feedback/	500–800	Safe complaint channels	Submit safely
Publications & Research	/publications/	500–800 hub	Haor development research/resources	Download
Volunteer With ERA	/volunteer/	800–1,100	Volunteer in Bangladesh/Sunamganj	Apply
Donor FAQ	/donate/faq/	800–1,200	Donation methods, receipts, restrictions and privacy	Donate
Donation Bank Transfer Confirmation	/donate/bank-transfer-confirmation/	300–500 + form	Noindex if appropriate	Submit receipt details

Google says its SEO goal is helping search engines understand content and helping users decide whether the result is useful; it also cautions that ranking improvements are neither instantaneous nor guaranteed.

⁶ Therefore ERA should create these pages **only where it has enough original information to make each useful**. Do not generate 100 near-identical location or project pages solely to increase the page count.

Content templates

Template	Required blocks	Recommended length
Impact story	Outcome-led headline; hero photo; "at a glance"; person/community context; before situation; ERA intervention; verified change; participant quote; numbers with source/reporting period; project/funder; consent/safeguarding note where appropriate; related work; CTA	700–1,100 words
Project page	Status; dates; funder; location; target groups; project need; objectives; theory/results chain; activities; budget if publishable; targets; progress/outcome table; map; stories; publications; partner acknowledgement; contact; last updated; CTA	1,200–1,800

Template	Required blocks	Recommended length
Donor page	Human problem; ERA's response; verified evidence; one-time/monthly toggle; preset amounts; designation; trust strip; payment form; alternative bank transfer; donor FAQ; privacy/refund/receipt information	700–1,200 plus form
Blog/explainer	Named author and role; publication/update dates; specific question; evidence and source links; field insight; what ERA is learning; related program/project; CTA; category/tags	800–1,500
Annual-report web page	Year at a glance; verified beneficiary/reach indicators; geographic coverage; outcomes by program; challenges/lessons; funding and expenditure charts; governance; partner acknowledgements; methodology; accessible PDF	1,500–3,000
Research/publication page	Summary; methodology; findings; geographic relevance; authors; publication date; citation details; accessible download; related programs	500–900
Partner profile	Partner relationship; projects; geography; duration; results; acknowledgement/logo permission; related stories	400–700
Location page	Map/context; community needs; programs active; current/completed projects; local results; stories; field office/contact where appropriate	600–1,200

For impact stories in particular, ERA should resist turning every article into a sentimental beneficiary profile. The strongest model combines **human experience + verified intervention + measurable result + context**. This aligns with donor-evaluation guidance that charities should communicate the quality and depth of results, not merely numbers of activities or people served. ²⁵

ERA already has story material with concrete economic outcomes—for example case material describing livelihood assistance and subsequent household income—which can be re-edited into stronger before/intervention/result formats after verifying the underlying monitoring records and participant consent. The existing content archive therefore has significant reuse value rather than requiring all-new writing.

Bangla/multilingual design

I recommend a **real bilingual information architecture**, not a Google-Translate widget.

The lower-risk SEO implementation is to preserve today's established English URLs wherever practical and create corresponding Bangla pages under a predictable structure such as `/bn/...`. Every translated pair should include reciprocal `hreflang` annotations, for example English + `bn-BD`, and an appropriate `x-default` where useful. Google's current guidance specifically recommends informing it about localized versions and ensuring each version references itself and its alternatives. ²⁰

Priority Bangla translation should proceed in this order:

Tier A: Home, About, Donate, donation FAQ, all payment screens, thank-you/receipt, seven program hubs, Impact, Contact, complaints/safeguarding.

Tier B: active projects, flagship impact stories, emergency appeals, volunteer, partnership pages.

Tier C: archive projects, older articles and publications according to continuing usefulness/search demand.

Translation must include **titles, descriptions, menus, alt text, form labels, validation messages, payment instructions, consent/privacy language, email confirmations and downloadable-resource summaries**, not only body paragraphs. Bangla copy should be edited by a native communications professional familiar with development terminology; mechanically literal translation would undermine the trust benefit.

BRAC's current Bangladesh site provides a useful local precedent for maintaining a substantive Bangla content experience rather than treating Bangla as a superficial add-on. ³⁰

Donor acquisition, conversion and stewardship

ERA's current online donor journey has a severe discontinuity: the homepage solicits sponsorship, while the principal donation page provides bank details rather than a modern transactional giving flow. ³¹

Bangladesh peers demonstrate that supporters increasingly encounter online amount selection and campaign-oriented donation experiences: BRAC currently exposes an online donation form with currency and donor fields; Bidyanondo uses campaign-specific gift amounts; JAAGO has a defined child-sponsorship proposition. ³² ERA does not need to imitate these organizations, but donors' usability expectations will be influenced by them.

Recommended donor funnel

Donation-page specification

The first screen should answer four questions immediately:

What will my gift support?

A one-sentence case for support tied to ERA's work in the haor region.

Can I choose the amount?

Suggested amounts such as BDT 500 / 1,000 / 2,500 / 5,000 / custom, plus one-time/monthly toggle. The amounts should **not** be labeled with invented claims such as "BDT 500 provides clean water for one family" until ERA's program and finance teams calculate and approve the real unit cost.

Can I trust ERA?

A compact trust strip: established 1997; registration numbers; audit/annual-report links; physical address;

secure payment; relevant partners. ERA already publicly provides registration information and partner relationships that can support this layer. 29

How difficult is payment?

Keep initial required fields to what finance/receipt/compliance genuinely requires. Do not collect extensive demographics simply because a CRM supports them.

Recommended form fields are: amount, frequency, fund/campaign, full name, email, phone where needed, country, payment method, privacy acknowledgment and optional communication consent. Address and other details should be conditional unless legally or operationally required.

CTA placement

Use one visually consistent primary label—**Donate**—rather than alternating donation and sponsorship language.

Place it:

- persistently in desktop navigation;
- as a sticky/mobile-friendly action;
- in the homepage hero;
- after the first credible impact/results block;
- within program pages after evidence;
- at the end of impact stories;
- on active project pages;
- in emergency-appeal pages;
- in the footer.

A page should normally have **one primary conversion objective**. A project page can offer "Donate to this work" and a less-prominent "Partner with ERA"; it should not simultaneously demand donation, volunteering, newsletter subscription, employment applications and five social follows at equal visual weight.

Payment options

Option	Bangladesh/ local fit	International potential	Strengths	Limitations / due diligence	Recommendation
SSLCOMMERZ	High	Supports broad payment aggregation; confirm ERA's specific international merchant configuration	Official APIs, plugins and multi-channel gateway; PCI-related security information is publicly documented. ³³	Confirm nonprofit onboarding, international-card acceptance, recurring/tokenization requirements, settlement and refund terms in ERA's contract	Primary shortlist
aamarPay	High	Its official site advertises local and international payment acceptance	Cards plus bKash/ Nagad and other channels, payment links, QR, invoices; current published plans include percentage transaction rates. ³⁴	Merchant registration asks NGOs for relevant permission documents; negotiate nonprofit terms and verify recurring support. ³⁵	Strong alternative
shurjoPay	High	Official site says international customers can pay and that international payments may be received subject to Bangladesh rules	PSO-licensed positioning, PCI DSS information, QR/payment links, API/ IPN verification. ³⁶	Pricing is quotation-based in current material; confirm NGO documentation, recurring functionality and settlement schedule	Strong alternative

Option	Bangladesh/ local fit	International potential	Strengths	Limitations / due diligence	Recommendation
Direct bKash API	Very high for bKash users	Not an international-card solution	Tokenized checkout APIs and transaction lookup are available to onboarded merchants. ³⁷	Adds a separate integration/reconciliation path; API/product capabilities depend on onboarding agreement	Phase-two option if needed
Bank/SWIFT transfer	High for large/manual gifts	Useful for foreign wires where compliant	ERA already publishes a bank and SWIFT route. ²	High donor friction; manual matching and receipts	Keep as alternate channel
Stripe direct	Not currently available as a Bangladesh merchant-country option	—	Strong global ecosystem elsewhere	Bangladesh is absent from Stripe's current supported-country list. ⁹	Do not design phase one around it

Before enabling foreign-source online gifts, ERA should obtain a written finance/legal/compliance interpretation applicable to its registration and approved projects. NGOAB's current published conditions state that registered organizations must comply with the applicable foreign-donation regime and that foreign donations/project implementation are subject to prior approvals and specified banking controls.

¹⁰ This report is a web/fundraising strategy, not legal advice.

Recurring giving

Recurring giving deserves its own landing page and the default donation experience should make the option clearly visible without deceptively preselecting it.

The technical procurement requirement should say:

"Gateway must support a compliant recurring/tokenized mechanism under ERA's merchant category, with documented cancellation, retry, expiration, refund, reconciliation and webhook/IPN behavior."

Do **not** assume that tokenization shown in a provider's marketing material automatically means ERA can run unrestricted monthly donations; confirm merchant-contract functionality during procurement.

A fallback, if true automated recurring debit cannot initially be approved, is a **monthly pledge/reminder program** using payment links. That is operationally inferior to genuine recurring payment and should be considered temporary.

M+R's 2026 benchmark found monthly giving represented 27% of online revenue among its participating nonprofits in 2025, making a monthly path strategically important even though those figures should not be treated as an ERA forecast. ¹¹

Trust architecture

The redesigned site should put trust evidence adjacent to the donation decision:

- NGO Affairs Bureau and Social Services registration details already stated by ERA; ¹⁷
- latest annual report and audited financials;
- board/executive committee and senior management;
- named partners and linked partner/project descriptions rather than unexplained logo walls;
- safeguarding policy and confidential reporting route;
- complaints/feedback policy;
- privacy and **donor privacy** policy;
- donation/refund and receipt guidance;
- physical address, organization phone and domain-based email;
- clearly dated, sourced impact indicators;
- a "How we measure impact" methodology;
- acknowledgement of challenges and lessons learned, not only success.

This is well aligned with external donor-trust guidance: Charity Navigator tells donors to look for staff/board information, financial/audit information and donor privacy policies, while Candid emphasizes demonstrable impact, financial clarity, leadership and governance. ³⁸

ERA should also improve email identity. Replace public dependence on a generic Gmail address with role-based addresses on the organization's domain—for example `donations@`, `partnerships@`, `communications@` and `safeguarding@`—with appropriate shared-mailbox access and continuity controls.

Stewardship sequence

A practical donor lifecycle should be:

Immediately after payment: on-screen confirmation + transaction/receipt email + explanation of what happens next.

Within the first week: short welcome message introducing ERA and the haor context, with no second hard ask immediately.

Following weeks: one evidence-rich story/project update related to the donor's selected interest.

Quarterly: compact impact update with results, challenges and what is next.

After a meaningful relationship period: ask a one-time donor to give again or become monthly; invite monthly donors into deeper impact reporting.

Annually: annual report, financial transparency update and personalized thanks where practical.

Lapsed donor: respectful re-engagement journey based on last gift/date/campaign.

The CRM must allow ERA to measure retention rather than merely count transactions. M+R's 2026 data found substantial differences between new and established donor retention, reinforcing the need to measure cohort behavior rather than assuming acquisition equals sustainable fundraising. ¹¹

Email acquisition

Every email signup should communicate a specific value proposition such as:

"Get field updates from Bangladesh's haor communities: impact stories, emergency updates and ways to help."

Use separate consent from donation processing where appropriate. Capture source/campaign and language preference. Suggested automated streams are: general welcome, new donor welcome, monthly donor welcome, failed-payment recovery, emergency donor follow-up, institutional-partner inquiry and lapsed-donor reactivation.

Social proof and partnerships

ERA's partner network is an underused credibility asset. The existing site presents recognizable partner logos but little contextual information. ³ Convert that asset into:

Partner → project → geography → period → verified result → related story → partner link.

Obtain logo/testimonial permission where required. For institutional donor acquisition, create downloadable two-page capability profiles for WASH, climate resilience, education, health and emergency response and a partnership contact form routed to the appropriate senior staff.

SEO, traffic growth and measurement

The SEO opportunity is not to chase broad terms such as "NGO" nationally. ERA has a much more defensible expertise intersection:

Sunamganj + haor geography + climate/disaster resilience + WASH + education + livelihoods + locally implemented humanitarian/development projects.

No reliable keyword-volume dataset was available in this research. Therefore the following are **candidate keyword clusters**, not claims about current volume. They should be validated against Search Console after verification and supplemented with Keyword Planner/another professional research platform where available.

Search intent	Initial English themes	Initial Bangla themes	Best destination
Organization/ local	NGO in Sunamganj; local NGO Sunamganj Bangladesh; haor development NGO; NGO working in haor region	সুনামগঞ্জ এনজিও; হাওর উন্নয়ন সংস্থা	About / Sunamganj
Climate/ disaster	climate resilience Bangladesh; disaster risk reduction Sunamganj; haor flash flood resilience	হাওর বন্যা; দুর্যোগ ঝুঁকি হ্রাস; হাওর জলবায়ু সহনশীলতা	Climate program
WASH	WASH NGO Bangladesh; safe water flood-prone Bangladesh; WASH Sunamganj	নিরাপদ পানি সুনামগঞ্জ; হাওরে পানি ও স্যানিটেশন	WASH
Livelihood	climate resilient livelihoods Bangladesh; livelihoods haor communities	হাওর জীবিকা; জলবায়ু সহনশীল জীবিকা	Livelihood
Education	girls education Bangladesh NGO; child rights NGO Bangladesh; education Sunamganj	সুনামগঞ্জ শিক্ষা সহায়তা; মেয়েদের শিক্ষা বাংলাদেশ	Education
Emergency donor	donate flood relief Bangladesh; support flood affected families Bangladesh	বন্যা ত্রাণ বাংলাদেশ; সুনামগঞ্জ বন্যা সহায়তা	Emergency appeal
General donor	donate to NGO Bangladesh; support Bangladesh charity/NGO	বাংলাদেশে অনুদান; এনজিওতে অনুদান	Donate
Institutional	WASH partner Bangladesh; local implementing partner Sunamganj; Bangladesh NGO partnership	primarily English institutional search	Partnership
Knowledge	haor flash floods Bangladesh; development challenges Sunamganj; safe water after floods Bangladesh	হাওর অঞ্চলের সমস্যা; আকস্মিক বন্যা হাওর	Blog/pillar pages

On-page SEO specification

Every indexable page should have one clear purpose and descriptive page title; a logical H1; concise introductory paragraph; natural related terminology; meaningful internal links; descriptive image alternatives; canonical URL; useful metadata; breadcrumb navigation; and an updated date where freshness matters. Google specifically recommends descriptive organization, relevant links, useful titles/ snippets and image alt text. ⁶

Build **topic clusters**, for example:

/programs/wash/

- ↳ Resilient WASH project
- ↳ "Safe Water After Flooding in the Haor Region" article
- ↳ beneficiary/community impact story
- ↳ WASH publication

- ↳ emergency WASH campaign
- ↳ Sunamganj location page

This creates useful internal relationships rather than isolated blog posts.

For old projects, do not delete completed content simply because the project ended. Mark the project **Completed**, retain its final results, link final reports and point to related current programs. That turns ERA's historical portfolio into evidence of institutional experience.

Technical SEO launch standard

The development team should validate:

`robots.txt` → XML sitemaps → canonical tags → HTTPS → redirects → status codes → pagination/archive handling → noindex decisions → structured data → image indexing → mobile rendering → Core Web Vitals → hreflang → broken links → downloadable documents → Search Console coverage.

Google recommends sitemap submission through Search Console, consistent canonicalization and explicit handling of localized pages. ³⁹

Performance should meet the current "good" Core Web Vitals thresholds at the 75th percentile where field data exist: **LCP ≤ 2.5 seconds, INP ≤ 200 milliseconds and CLS ≤ 0.1.** ⁴⁰

Backlink strategy

ERA should pursue links based on genuine institutional relationships rather than paid/link-scheme tactics.

Highest-value prospects are:

Partner links. Ask current/previous funders and consortium partners to link their ERA project descriptions to the relevant ERA project page.

Research citations. Produce useful resources such as "Haor WASH Field Learning Note," "Community Flash-Flood Preparedness Lessons from Sunamganj" and project evaluation summaries that academics, journalists and development organizations can cite.

NGO/development directories. Ensure accurate listings in legitimate institutional directories and partner profiles.

Media expertise. Create an expert/contact page and offer evidence-backed field perspective to Bangladesh development/climate reporters during relevant events.

University/research collaboration. Package anonymized/aggregated field learning where ethically and contractually appropriate.

Partner campaign co-publication. During project launches or results announcements, coordinate reciprocal, editorially relevant links.

Google itself notes that links from other pages are an important way content is discovered and encourages legitimate promotion while warning against manipulative promotion practices. ⁶

Local SEO

ERA should verify and maintain its Google Business Profile, organization name, Sunamganj address, current phone, website URL, hours and representative photographs. Ensure website contact details exactly match authoritative listings. Create a Sunamganj location page with organization description, map/contact information and local work rather than producing generic location pages.

Three-month editorial calendar

This calendar assumes the program begins in **September 2026**. Each major English article should receive a Bangla counterpart on the prioritized schedule, not be auto-translated and published unchecked.

Month	Asset	Suggested working title	Primary keyword/theme	CTA	Funnel role
Sep	Pillar article	Why Bangladesh's Haor Communities Face Recurrent Flash-Flood Risk	haor flash flood Bangladesh	Explore climate work	Discovery
Sep	Project update	Resilient WASH: What ERA Is Learning in Flood-Prone Sunamganj	WASH Sunamganj	Support WASH	Evidence
Sep	Impact story	Safe Water, Safer Recovery: A Family's Story After Flooding	flood safe water Bangladesh	Donate	Emotion + evidence
Sep	Donor explainer	Where Your Donation Goes: How ERA Funds Community Action	donate NGO Bangladesh	Donate	Conversion
Oct	Pillar article	Girls' Education in the Haor Region: Barriers and Local Solutions	girls education Bangladesh	Support education	Discovery
Oct	Impact story	From Educational Support to Opportunity: One Student's Journey	education support Bangladesh	Education giving	Conversion

Month	Asset	Suggested working title	Primary keyword/theme	CTA	Funnel role
Oct	Project explainer	Reducing Lightning and Disaster Risk in Sunamganj: ERA's Approach	disaster risk Sunamganj	Explore/partner	Expertise
Oct	Transparency	How ERA Measures Impact and Reports Funding	NGO transparency Bangladesh	View reports	Trust
Nov	Pillar article	Climate-Resilient Livelihoods for Haor Communities	climate resilient livelihoods Bangladesh	Support livelihoods	Discovery
Nov	Partner story	Working Together in Sunamganj: What Effective Local Partnership Looks Like	NGO partnership Sunamganj	Partner with ERA	Institutional
Nov	Impact/report	ERA Impact Snapshot: Results, Reach and Lessons from the Latest Reporting Year	ERA impact	Read annual report	Trust
Nov	Campaign landing page	Help Haor Families Enter 2027 Safer and More Resilient	donate Bangladesh NGO	Donate / Monthly	Year-end conversion

Each asset should generate derivative content: a Bangla version, one email, two to four social posts, a photo carousel/short video where consent allows, and internal links from relevant program/project pages. This is more efficient than producing disconnected social posts.

Analytics architecture and KPIs

Google Analytics 4 is event-based, and important actions can be marked as key events; Search Console exposes clicks, impressions, CTR and average position for organic search. ⁴¹ ERA should build a dashboard around decisions rather than vanity traffic.

Acquisition KPIs

KPI	Why it matters	Initial review cadence
Organic search clicks and impressions	Measures search visibility	Weekly/monthly

KPI	Why it matters	Initial review cadence
Non-brand vs branded search	Distinguishes discovery from people already seeking ERA	Monthly
Search CTR by query/page	Identifies weak titles/snippets	Monthly
Referring domains/partner traffic	Measures partnership/backlink growth	Monthly
Email/social/referral sessions	Shows productive channels	Monthly
New donor acquisition by source	Connects traffic with fundraising	Monthly

Search Console now provides dimensions for queries and pages and can help identify high-impression/low-CTR opportunities. ⁴²

Content KPIs: indexable pages, indexed pages, program-page traffic, engaged sessions, story-to-donate CTR, project-to-partnership inquiry rate, publication downloads, Bangla/English usage, organic entrances by content cluster and assisted donations.

Donation-funnel events

Recommended analytics event vocabulary:

```

donation_page_view
→ donation_frequency_select
→ donation_amount_select
→ donation_checkout_start
→ payment_gateway_redirect
→ payment_success_verified
→ donation_receipt_sent

```

Successful payment should be verified by the gateway's server-side status/IPN/webhook before being treated as fundraising revenue. shurjoPay, for example, explicitly documents IPN receipt followed by payment verification and updating the merchant's system. ⁴³ GA4 permits recommended/custom events and server-side Measurement Protocol supplementation. ⁴⁴

Track:

Donation conversion rate = verified online donations / donation-page sessions.

Checkout completion = verified payments / checkout starts.

Average gift = verified donation revenue / verified gifts.

Monthly-giving share = recurring donors or revenue / relevant donor or revenue total.

New donor acquisition by source/campaign.

Second-gift rate.

One-year donor retention.
Recurring churn/failure rate.
Campaign revenue and donors.
Payment success/failure rate by method/device.
Cost per acquired donor, when paid media begins.
Donor lifetime value, after enough longitudinal data exist.

Do not create arbitrary industry targets before seeing ERA's baseline. Establish the first **30–60 days of clean data**, then set improvement targets—for example relative reduction in abandonment or relative increase in donation conversion.

Never send names, email addresses, phone numbers, beneficiary details or other personally identifying information into Google Analytics. Keep identity and detailed donation records in the CRM; analytics gets anonymous/pseudonymous behavioral dimensions such as campaign, language, gift frequency, payment channel and donation range.

Technology, integrations and operating model

The public site's publishing/comment patterns suggest WordPress, but backend confirmation is required before making a final platform decision. ¹³ Assuming the installation is maintainable, **WordPress + structured custom content types + a nonprofit CRM + a Bangladesh payment gateway** is likely the highest-value architecture.

CMS comparison

CMS	Strengths for ERA	Weaknesses	Relative implementation burden	Recommendation
WordPress	Strong editor familiarity, flexible pages/posts/custom content, enormous extension ecosystem, no core licensing fee. WordPress describes itself as extensible through plugins and suitable for everything from simple publishing to complex portals. ⁴⁵	Plugin quality/ security/ governance must be controlled; poorly built themes can hurt speed/ accessibility	Low–medium , especially if current site is already WP	Recommended default pending backend audit

CMS	Strengths for ERA	Weaknesses	Relative implementation burden	Recommendation
Drupal	Excellent structured content, permissions/workflows, multilingual and enterprise governance; open source/no vendor lock-in. ⁴⁶	Higher specialist development/admin skill requirement; migration likely unnecessary for ERA's current scale	High	Consider only if ERA needs complex multisite/workflow/governance
Webflow	Strong visual design/editor experience and managed hosting; contemporary CMS	SaaS limits/costs; payment/local CRM integrations may require more custom middleware; 2026 plans impose explicit CMS/static-page tiers. ⁴⁷	Medium	Good brochure platform, weaker strategic fit for ERA's integration-heavy nonprofit stack
Headless/custom CMS	Maximum control and performance potential	Higher engineering burden, dependency on developers for ordinary maintenance, more integration work	Very high	Not justified unless ERA develops a much larger digital platform

For WordPress, create structured content types for **Programs, Projects, Impact Stories, Publications, Partners, Locations, Team Members and Campaigns** rather than hard-coding each as unrelated pages. Editors should enter structured fields such as funder, dates, location and results once, allowing filtering and consistent presentation.

Security needs to be an operating discipline. WordPress's own hardening documentation recommends current software, secure file permissions, protected configuration, backups, logging and monitoring. ²⁴

CRM comparison

CRM	Nonprofit suitability	Advantages	Drawbacks	ERA fit
CiviCRM	Purpose-built open-source nonprofit CRM	Contribution/donor orientation, organization/contact relationships, nonprofit ecosystem, self-hosting freedom; CiviCRM publicly reports large-scale donation/contact use. ⁴⁸	Requires capable implementation/support; Bangladesh gateway connector may need custom development and validation	Best mission/ownership fit if ERA has technical support
HubSpot	General CRM/marketing platform	User-friendly contacts, forms, pipelines, marketing automation ecosystem	Nonprofit fundraising data model is less native; advanced automation/reporting can become expensive	Best ease-of-adoption fit for donor/partner pipeline
Salesforce Nonprofit Cloud	Deep purpose-built nonprofit platform	Fundraising, programs/outcomes, volunteer management, extensive ecosystem; eligible nonprofits can currently receive 10 licenses at no cost through Power of Us. ⁴⁹	Substantial implementation/admin complexity; paid Nonprofit Cloud Enterprise is currently listed at \$60/user/month beyond relevant grants/discounts. ⁴⁹	Strong for a future enterprise operating model, probably excessive for website phase one
No CRM / spreadsheet	Poor	Lowest immediate software cost	Fragmented history, weak retention measurement, duplicate contacts, manual receipts/segmentation	Do not use as long-term donor system

My default recommendation would be **CiviCRM if ERA can secure reliable local/remote technical administration**, or **HubSpot initially if staff usability and partnership pipeline are more important than sophisticated nonprofit gift accounting**. Salesforce is worthwhile only if ERA is ready to implement it as an organization-wide platform rather than as a website address book.

Before selecting CiviCRM, prototype the exact gateway integration. The existence of both platforms does not guarantee an off-the-shelf SSLCOMMERZ/aamarPay/shurjoPay recurring-payment extension.

Required system integrations

The target stack should include:

CMS: structured WordPress implementation, staging and revision workflow.

Payment gateway: selected PSO/gateway with sandbox, payment verification, failure handling, refunds, reconciliation, local payment methods, international-card pathway where approved and recurring capability if contracted. SSLCOMMERZ provides APIs/plugins; aamarPay advertises cards, bKash/Nagad, QR/payment links; shurjoPay provides payment gateway, QR/payment links and international acceptance language. 50

CRM: donor, gift, communication, campaign, consent and relationship records.

Newsletter/email: CRM-integrated provider with Bangla Unicode support, segmentation, unsubscribe management, authentication (SPF/DKIM/DMARC), automation and delivery reporting.

Transactional email: separate reliable path for donation receipts, form acknowledgements and payment notifications.

Forms: donor inquiry, partnership inquiry, volunteer application, general contact, media, bank-transfer confirmation and safeguarded complaints. Do not funnel confidential safeguarding complaints through ordinary marketing automation without a security/privacy design review.

Receipt system: unique receipt/reference number; donor details; transaction amount/currency/date; payment reference; campaign/designation; ERA identification; appropriate disclaimer/tax language reviewed by finance/legal; PDF/email generation if required.

Analytics: GA4 + Google Tag Manager + Search Console; optionally a privacy-focused first-party analytics layer if operationally useful.

Dashboarding: Looker Studio or CRM dashboard connecting traffic, donations, campaigns and content where data governance permits.

Search: native search that indexes programs/projects/publications and supports filters as the archive expands.

Maps: lightweight, accessible location mapping for program coverage—avoid an unnecessarily heavy map on every page.

Consent/privacy: consent logging where required, publication/privacy policies and clear separation between transaction communications and marketing consent.

Performance: CDN/caching, image optimization, responsive images, database cleanup, minimal third-party scripts and monitored Core Web Vitals.

Security: managed TLS, WAF/rate limits, MFA, least privilege, automated updates with staging/change control, malware monitoring, independent backups, uptime monitoring, security logs and documented incident escalation.

Recommended publishing workflow

Field/program staff → evidence/data owner → communications editor → English draft → factual/source check → safeguarding/consent check → Bangla editor/translation → SEO/metadata → program-manager approval → publish → internal links → email/social distribution → quarterly review.

This workflow directly addresses the problem visible today: potentially useful field information exists, but statistics, terminology, dates and outcome presentation are not consistently governed.

Implementation roadmap, staffing, cost and risk

The planning estimates below are **not vendor quotations**. They are a scope model intended to help ERA request comparable proposals. Actual cost will depend heavily on whether the existing WordPress/theme can be reused, whether content source documents are organized, how many pages require Bangla translation, and whether recurring payments require custom gateway/CRM engineering.

Suggested team

Role	Core responsibility	Likely involvement
Digital/project lead	Scope, requirements, approvals, agency/vendor management	0.3–0.6 FTE during project
UX/information architect	Sitemap, donor journeys, wireframes, accessibility	50–90 h
UI/web designer	Visual system, responsive layouts, components	45–90 h
WordPress/full-stack developer	Templates, CMS model, gateway, CRM, performance	130–250 h
SEO/analytics specialist	Crawl, keyword mapping, redirects, GSC/GA4/GTM, dashboards	40–80 h
Fundraising/CRM specialist	Donor journey, recurring giving, stewardship, CRM data model	40–80 h
English content strategist/editor	Rewrite, templates, fact checking, metadata	80–180 h
Bangla translator/editor	High-quality localization and QA	70–180 h depending scope
Program/M&E focal points	Validate results, impact numbers, claims and project context	Internal, 40–100 h distributed
Finance/compliance focal point	Gateway, receipts, audits, financial facts, foreign donations	Internal, 25–60 h
QA/accessibility/security specialist	Cross-device, accessibility, security, payment QA	40–80 h

Cost scenarios

Scenario	Practical scope	Approx. specialist hours	Planning cost
Low / stabilization	Retain existing WP/theme; fix content defects; reorganize menus; launch 10–20 priority pages; gateway/payment link or basic checkout; GA4/GSC; basic newsletter/CRM; limited Bangla	180–320 h	US\$3,000–7,000
Medium / recommended	UX redesign; structured WP content; 30–60 strong pages; seven program hubs; donor/transparency suite; full online gateway; CRM integration; key bilingual pages; analytics; SEO; accessibility/performance improvements	450–800 h	US\$10,000–25,000
High / digital platform	Full bilingual redesign; 70–120+ enriched pages; advanced CRM; custom recurring integration; impact dashboard; extensive migration; publication library; advanced stewardship; formal accessibility/security testing	900–1,600+ h	US\$30,000–70,000+

Software subscriptions, gateway transaction charges, hosting/CDN, professional photography/video, large-scale translation, paid media and annual CRM administration should be budgeted separately.

Current gateway pricing should be treated as procurement-time information rather than embedded permanently in a project budget. For example, aamarPay currently publishes percentage transaction rates on some plans plus plan-dependent onboarding terms, while other offerings use quotations. ⁵¹ Ask each shortlisted gateway for a **written NGO merchant proposal** covering onboarding, domestic cards, MFS, international cards, recurring/tokenized payments, settlement, refunds, chargebacks, transaction limits, reporting, API support and all taxes/fees.

Prioritized milestones and hours

Timing	Milestone	Deliverables	Est. hours	Priority
Week 1–2	Evidence and access baseline	GA/GSC/GTM/hosting/CMS access; content crawl; backup; plugin/theme inventory; current payment/bank process; data-owner list	30–50	P0
Week 1–3	Trust repair	Correct sponsorship terminology, volunteer figures, email/contact errors, project dates, obvious grammar/claims; validate registrations and leadership	25–45	P0

Timing	Milestone	Deliverables	Est. hours	Priority
Week 2-4	Information architecture	New sitemap, URL map, content types, redirect plan, donor journeys, bilingual model	30-50	P0
Week 2-5	Fundraising specification	Gateway RFP/onboarding, donation fields, receipts, recurring requirements, CRM schema, compliance review	35-60	P0
Week 3-6	UX/UI system	Home, program, project, story, donate, impact, report, contact templates; mobile/ accessibility states	60-100	P1
Week 4-10	CMS development	Structured content types, menus, components, templates, search/filtering, staging	80-150	P1
Week 5-10	Donation + CRM integration	Checkout, IPN/webhook verification, failure/retry, CRM records, receipt, bank-transfer flow	50-100	P0
Week 5-11	Core content production	Seven program hubs, Impact, Donate, About/governance, financial/transparency, partner and location pages	90-170	P1
Week 6-12	Priority Bangla localization	Core navigation, donor path, program pages, trust/safeguarding/contact content	60-120	P1
Week 7-11	SEO/analytics implementation	GA4/GTM, key events, Search Console, sitemap, metadata, schema, hreflang, redirects	35-60	P0/P1
Week 10-13	QA and hardening	Browser/mobile testing, keyboard/screen reader sample, payment QA, performance, security, backups/restore	50-90	P0
Week 13	Launch	DNS/release, redirect verification, sitemap submission, analytics verification, monitoring	15-25	P0
Month 4-6	Content/SEO expansion	Project enrichment, locations, 12+ editorial assets, backlinks, partner outreach	120-220	P2
Month 4-6	Fundraising optimization	Funnel analysis, A/B tests, monthly-giving refinement, stewardship automation	40-80	P2

A realistic medium implementation therefore reaches a public launch in approximately **12-16 weeks**, with the richer information architecture and donor-growth program continuing through month six. A comprehensive bilingual migration should be treated as a six-month program rather than delaying the entire site until every historic page has been translated.

Acceptance milestones

At **launch**, ERA should have:

- a functioning online donation flow and bank-transfer alternative;
- verified payment-to-CRM-to-receipt reconciliation;
- successful GA4 donation measurement;
- consistent sponsorship terminology;
- seven program hubs;
- Impact and Transparency destinations;
- current registration/governance information;
- latest available audit/annual report clearly accessible;
- priority English/Bangla donor journeys;
- Search Console verified and sitemaps submitted;
- redirects tested;
- mobile and keyboard testing passed;
- backup restoration tested;
- designated editorial/data owners.

At **90 days post-launch**, management should receive the first fundraising/content dashboard comparing acquisition channels, donation conversion, payment failure, donor type, organic search growth, program-content performance and Bangla/English usage.

Risk register

Risk	Consequence	Mitigation
Publishing inconsistent/unsupported impact numbers	Donor and partner trust damage	Metric dictionary: definition, period, geography, source, M&E owner, approval date for every headline statistic
Foreign donation/payment setup conflicts with NGOAB requirements	Compliance/settlement risk	Finance/legal review before enabling foreign-source gifts; document gateway and bank flows against current NGOAB approvals. Current NGOAB instructions explicitly impose foreign-donation/project/banking conditions. ¹⁰
Gateway advertised capability differs from NGO merchant capability	Delayed launch/failed recurring model	Obtain sandbox and written merchant terms; build proof-of-concept before finishing UI
Over-expanding page count with thin content	Poor usability/search quality, maintenance burden	Publish only pages with unique need, evidence and ownership; Google's guidance prioritizes useful user-focused content. ⁶
Old project information remains inaccurate	Institutional credibility risk	Give every active project an internal content owner and quarterly review date

Risk	Consequence	Mitigation
Sensitive beneficiary storytelling	Safeguarding/privacy harm	Written/recorded consent process, anonymization where needed, special rules for children/vulnerable people, easy withdrawal/update process
Translation inaccuracies	Loss of credibility; potentially harmful program/compliance wording	Native Bangla editorial review and subject-matter approval, especially safeguarding/donation text
Plugin-heavy WordPress implementation	Security and performance degradation	Minimal approved plugin set; staging; update policy; access control; backups/logging per WordPress hardening guidance. ²⁴
Payment page compromise/fraud	Financial and reputation damage	Gateway-hosted/tokenized handling, WAF, MFA, minimal stored payment data, monitoring and reconciliation
Analytics contains donor PII	Privacy risk	Analytics data-layer specification prohibiting names/emails/phone/address; identity stays in CRM
No content owner after launch	Site becomes stale again	Quarterly editorial board; each program nominates one source person; publish calendar and SLA
Staff rely on agency for every update	Cost and operational dependency	Structured CMS templates, training, documentation and role-based publishing workflow
SEO migration breaks established URLs	Traffic/index loss	Full URL inventory, one-to-one 301 redirects, canonical/hreflang tests, Search Console monitoring
Annual reports remain PDF-only	Low discoverability/accessibility	Publish HTML summaries plus accessible downloadable files
Fundraising emphasizes acquisition but not retention	High cost, weak donor value	CRM-driven welcome, reporting, recurring giving and retention cohorts from day one; external nonprofit data show new-donor retention can be materially weaker than established-donor retention. ¹¹

The highest-return first actions, in order, are therefore:

First: fix public factual inconsistencies and establish one verified source of truth for impact numbers, registration details, leadership, active projects and sponsorship terminology. ERA already possesses many trust assets; they are simply not yet presented consistently. ⁵²

Second: obtain GA4/Search Console/hosting/CMS access and create the pre-change baseline. Search Console should become the source for organic clicks, impressions, CTR, positions and indexing—not assumptions based on public searches. ⁵³

Third: implement a secure local payment gateway with properly verified payment success, automated receipts and CRM capture while retaining bank/SWIFT transfer. Evaluate SSLCOMMERZ, aamarPay and shurjoPay against a written nonprofit requirements matrix. ⁵⁰

Fourth: launch the seven program hubs, Impact, Where We Work, Partner With ERA, Governance, Financial Transparency, Safeguarding and donor pages. This turns today's relatively shallow navigation into an evidence-rich institutional website. ¹²

Fifth: build the English/Bangla system correctly using distinct crawlable versions and `hreflang`, then translate the highest-value donor and program content first. ²⁰

Sixth: move from occasional posting to a field-to-publication pipeline in which each article supports a program hub, search theme, email message and donor journey.

Seventh: optimize from actual conversion and retention data. The most important success measure is not "we created more pages" or even "traffic increased"; it is that more appropriate visitors understand ERA, trust its evidence, complete donations or partnership inquiries, return, and develop a longer-term relationship with the organization. That approach is consistent with current nonprofit trust guidance emphasizing measurable change, financial clarity and governance, and with current digital fundraising benchmarks highlighting the importance of recurring giving and donor retention. ⁵⁴
